## DETAILED ACTION

### *Drawings*

1. The drawings submitted by applicant on 10/05/2001 have been accepted.

### *Allowable Subject Matter*

2. The following is an examiner's statement of reasons for allowance:
3. Regarding claims 1, 5, 9, 13, 17, 21 and 25, the prior art of record teaches of a mobile communication terminal, method and program using an adaptive array method, the mobile communication terminal being provided with a plurality of antennas, a reception circuit which multiplies a signal received using each of the plurality of antennas by a weight vector, and a transmission circuit which transmits the multiplied signal using each of the plurality of antennas, reception means for forming a directivity pattern for receiving a desired reception signal from a base station and receiving the reception signal from the base station using the formed directivity pattern. The prior art of record also teaches of transmission circuit for transmitting at least one of a transmission signal using the directivity pattern formed in reception and an omnidirectional transmission signal, and transmission control means for controlling the transmission means. However, the prior art of record fails to teach **where when the detection means detects a reception error, transmission is done utilizing an omnidirectional transmission signal and when no error is detected, the transmission signal comprises the directivity pattern formed in reception.**

4. Claims 2-4, 6-8, 10-12, 14-16, 18-20, 22-24 and 26-28 depend on allowed independent claims 1, 5, 9, 13, 17, 21 and 25, respectively; therefore, the examiner gives the same reasons for allowance as set forth above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

US Patent No.: 6,173,190 B1; deals with a signal receiving apparatus and method. It also, receives a directive pattern and transmits a non-directive pattern.

US Patent No.: 6,449,469 B1; deals with switched directional antenna for automotive radio receivers.

US Patent No.: 5,867,792; refers to a communication device with adaptive antenna.
